

The Promise of Urban Agriculture.

Niagara Bottling Co. wants to come to the area (tax free) to bottle and to sell 1.75 million gallons of Kingston City Water (Cooper Lake) per day. The Water may be tax free too. It is unclear whether or not that to be the case at this time.

The City of Kingston's Water Department has provided a 'will share' letter to the project without the Common Council's permission. A rate has not yet been negotiated, and needing the same approval.

With an estimated 260 trucks per day coming and going out of the site! That's a lot of trucks.

According to their proposal, **160 JOBS** may be created when the facility is working at full capacity.

Based on an Urban Agriculture study that was created specifically for Kingston, the City of Kingston has approximately 800 acres of zoned 'vacant' land in Kingston. **With just 35 acres working for us inside the city, we would create approximately 156 jobs.** Kingston is way ahead of the curve on the Urban Ag front in the Hudson Valley, too.

We can do this, Kingston.
