

August 16, 2018

Dear Supervisor Quigley and Town Board Members,

As your constituents, we write to you to ask for clarity on whether the Town of Ulster Zoning Code (the “Zoning Code”) currently regulates gas-fired power plants, and specifically request a statement as to how the Town is treating the proposed Lincoln Park Grid Support Center (the “Project”) under the Zoning Code.

The applicant for the Project, Lincoln Park GC, LLC, has stated that the project can be built as-of-right in the OM District because it is a “utility company structure”. We do not believe the Zoning Code permits gas-fired power plants as-of-right within any zone in the Town. We ask the Town Board and Building Department to clarify whether the Zoning Code regulates gas-fired power plants such as the Lincoln Park Grid Support Center, and if so, whether such power plants are permitted as-of-right in the OM District.

The property where the Project is proposed to be sited is primarily zoned as an Office and Manufacturing District (OM District) with a small portion of the property on which the plant would not be constructed located within the R-30 Residence District. The Zoning Code permits “utility company structures” as-of-right within the OM District. The Zoning Code does not include a definition of “utility company structure” and power plants are not discussed as possible uses within any of the districts under the Zoning Code.

Under the Zoning Code, “utility company structures” are permitted within *any* zone within the Town of Ulster, with the sole exception of the Traditional Neighborhood Development Overlay District. We do not believe that the Town intends to allow power plants, with their heavily industrial character and significant health, environmental and quality of life impacts, to be permitted within even the most restrictive residential district in the Town.

We also emphasize that the Town's 2007 Comprehensive Plan (the "Comprehensive Plan") recommends adoption of a "Ridge Protection Overlay District" that would include the area of the Project. The Comprehensive Plan urges additional land use regulations to conserve the ridgelines in the Ridgeline Protection Area and their natural environment and scenic vistas. While this zoning has not yet been adopted, the Town must still consider that the area of the Project has been identified in the Comprehensive Plan as especially valuable and deserving of special protection.

In 2017, the Town proposed a temporary moratorium on the installation of freestanding or ground-mounted solar energy systems. The Town's stated rationale for doing so was that solar energy facilities are "not currently regulated in the Town of Ulster Zoning Code." Apparently, a solar power generation facility does not constitute a "utility company structure". As both solar facilities and gas-fired power plants generate electricity, and a solar facility would very likely have fewer negative impacts than a gas-fired power plant, it makes no sense that a gas-fired power plant would be considered a "utility company structure" while a commercial solar facility would not. **Therefore, we request that the Town clarify that the proposed Project is not an as-of-right permitted use within the OM District in the Town.**

Similar to its approach to ground-mounted solar facilities, we also urge the Town Board to adopt a temporary moratorium on construction of fossil fuel-fired power plants while it considers amending the Zoning Code to provide for specific regulation of such power plants. Because "peaker" plants such as the Lincoln Park Project are likely to become more common throughout the Hudson Valley due to the incentives created by the Federal Energy Regulatory Commission's new capacity zone, and because these smaller plants are primarily regulated by local land use laws, it is important that the Town proactively identify which, if any, areas of the Town are suitable for such a use. Fossil fuel-burning power plants have unique impacts, including significant air emissions, noise, and visual impacts, and therefore warrant specific regulation within the Zoning Code to protect the health, safety and welfare of the community.

We respectfully request a written response to our inquiries regarding the Town of Ulster Zoning Code's regulation of fossil fuel-burning power plants and its specific treatment of the Lincoln Park Grid Support Project under the Code.
